Fulton HEALTH DEPARTMENT LAUNCHES VACCINE CLINICS

Rochester— The Fulton County Health Department is now scheduling appointments to administer COVID-19 vaccine (Moderna Vaccine) to eligible recipients.

The vaccine is now available to individuals age 70 and older, as well as to licensed and unlicensed healthcare workers and first responders who have face-to-face interactions with patients or infectious material or work in a public-facing position that requires in-person contact. A photo ID, proof of age, or verification of current employment as a healthcare worker or first responder in Indiana will be required.

The Fulton County Health Department will be holding a vaccination clinic from 8:00 a.m. until 12:00 p.m. and from 1:00 p.m. until 4:00 p.m. Thursday, January 21. A second vaccination clinic will be held on Friday, January 22, from 8:00 a.m. until 12:50 p.m. These vaccination clinics will be held at the Community Resource Center/Council on Aging/Fulton County Transpo; located at 625 Pontiac Street – Rochester, IN 46975. More information will be forthcoming about clinic hours and dates as eligibility requirements and vaccination supplies are provided.

Due to limited supply, vaccine is available by appointment only to those currently eligible as determined by the Indiana Department of Health. That complete list is posted to <https://ourshot.in.gov>, and appointments can also be scheduled at that website beginning Friday, January 8. There is no cost to the individual, but insurance may be charged an administration fee. Individuals should bring a photo ID and an insurance card if they have one.

Two vaccines, developed by Pfizer and Moderna, are currently available. Each requires two doses administered at least 21 days apart for the Pfizer vaccine and 28 days apart for the Moderna vaccine. According to the [Centers for Disease Control and Prevention](#), it typically takes a few weeks for the body to build immunity after the second vaccination.

The [U.S. Food and Drug Administration](#) has approved the vaccines under an Emergency Use Authorization (EUA), meaning the vaccines must be proven safe and effective in the same way that all medications and devices must be. The vaccines have been found in trials to be 94 percent to 95 percent effective in preventing COVID-19 infections in participants. Side effects are temporary and are generally mild, including fatigue, headache and sometimes fever.

People who have been vaccinated may still be able to infect others, so even those who are vaccinated should continue wearing a mask and quarantining if they are a close contact of a positive case.

The best ways to protect yourself and others are to:

- Wash your hands often with soap and water for at least 20 seconds
- Avoid touching your face with unwashed hands
- Avoid close contact with people who are sick
- Stay home when you're sick
- Cover your cough or sneeze
- Clean and disinfect frequently touched objects and surfaces
